Experiment – 5:

5. The online flight reservation system enables users to search for flights by destination, date, and class, displaying available options with real-time seat availability. Users can register, log in, and manage their reservations via a personal dashboard. The booking process includes selecting flights, choosing seats, entering passenger details, and making secure payments through an integrated payment gateway. Admins can manage flight schedules, seat inventory, and user accounts using an advanced admin panel Users receive booking confirmation emails with e-tickets and can view their booking history and travel itineraries. The website is fully responsive, ensuring an optimal experience on all devices.The airline reservation system is a web-based system that helps in consolidating flight data - flight schedules, seat availability, flight fares and reservations from all airlines with the help of global distribution systems and provides real-time inventory and rates for customers and travel agents to book flight tickets online.
